WHEEL NUT HARDWARE CAUTIONS:

Vehicle wheel nut hardware should always be inspected for wear and damage and replaced if necessary. Always ensure wheel mating surfaces are clean and wheel nuts are torqued to manufacturer's specifications to ensure optimal wheel clamping force.

To ensure the correct wheel nut hardware is installed on O.E.M. wheels, the most current FMSI Wheel Nut & Caps Application Guide should be utilized. FMSI does not accept any liability for errors in applications as result of incorrect part number selection, cross referencing or a "make fit" type fitment. Installing FMSI hardware based on cross referencing or "guessing" is done solely at the installer's risk.

Care must be taken when installing new wheel nuts on original equipment or aftermarket (winter steel rims) to insure the correct style wheel nut is used. Please review the various styles of wheel nuts shown below to understand how they seat with the rim and why using the incorrect wheel nut can result in serious damage to car and owner.

Checklist

1. Determine correct thread size of replacement wheel nut (12mm x 1.50, 1/2"-20 etc.)
2. Determine that the replacement wheel nut has the same outside socket (wrench) size as the original wheel nut and is no shorter in the overall length.
3. Determine the seat style (where the wheel nut meets the rim) and insure the wheel nut you will be installing is the correct style for the rim, this can change when winter steel rims are installed on vehicles.

NOTE: FMSI HAS PHASED OUT ANY STAINLESS STEEL CAPPED WHEEL NUTS AND REPLACED THEM WITH SOLID STEEL WHEEL NUTS WITH EITHER CHROME OR ZINC PLATING

	Solid steel, zinc OE chrome plated commonly used on steel rims (winter) (with 60°connical seat)		Modified Acorn (tapered Mag seal) with extended threads. Solid steel chrome plating (with 60°connical seat)		Retainer wheel nut. With a ridge or ring to hold a hub cap or a trim plate in place. Solid steel chrome plating (with 60°connical seat)
	Mag Wheel Nut Solid Steel Chrome plating. Comes in short & long shark & standard hex & long hex		Open end external thread wheel nut. accepts plastic cap (with 60°connical seat)		Retainer wheel nut. With a ridge or ring to hold a hub cap or a trim plate in place. Solid steel chrome plating (with radius/ball seat)
	Solid steel, chrome plated short acorn style Confirm length before replacing (with 60°connical seat)		Flanged flat wheel nut (with flat seat)		Chrome bulge nut (with radius ball seat)
	Open end solid steel bulge nut (with 60°connical seat)		Flanged flat solid steel wheel nut Chrome plating		Acorn Bulge solid steel chrome / Zinc plated wheel nut Confirm length before replacing (with radius/ball seat)
	Chrome Acorn nut (with radius ball seat)		Acorn Bulge solid steel chrome / Zinc plated wheel nut Confirm length before replacing (with 60°connical seat)		Ford Acorn Bulge solid steel chrome plated wheel nut Confirm length before replacing (with 60°connical seat)
