

**New Replacement Oil Filter for GM Applications
OF1403 / OF1403BP / HP1403 - WPH10064 / WPH10064BP
certain General Motors 4, 6, and 8 cyl engines - Ref GM TSB 17-NA-157
Replacing OF2222 on defined applications**

In response to General Motor TSB 17-NA-157, these filters address the different internal bypass specifications that are found in oil filters with similar appearance and can size to existing filters.

The new filter has an internal bypass valve opening pressure specification of **22 PSI** that matches the required specification supporting the increased oil pressures to accommodate the tighter engine tolerances found in certain make / models of General Motor vehicles.

Always follow the specific cataloged application information for your vehicle to assure correct filter selection and eliminate any possible dangers from installing the incorrect filter.

It is recommended on future installations to use the new and improved filter. Previous installation of OF2222 is still covered by our warranty and there is no need to replace the previously recommended, installed filters.

Expected volume will be similar to Service Champ OF4006, with a current VIO of 4.3 million.
