

SERVICE CHAMP OF4459/WPH2808 Oil Filter Design Changes

Due to a manufacturing change in mid-2018, a new, even more robust design of Service Champ OF4459/WPH2808 will begin shipping in Q4 2018. The current version is shown below in the center. The new design is on the right. On the left is the design that was primarily used during 2017 and before.

All designs are similar with the primary differences in the gasket and by-pass valves. The new design has a wider gasket that allows for easier installation. The by-pass valve performance is identical even though the poppet is a different color. Threaded plates differ in appearance but not function.

There is no change in fit, function or installation and all three designs meet all engine requirements.
